## Profile

Full-stack developer with a degree in Computer Science & Engineering and 3 years managing web and application projects for leading Bahrain organisations. I build responsive web applications with React, Next.js, TypeScript, Django and PostgreSQL, and recently led a team of five on a live CRM project. Years of work in schools give me a clear view of what parents, staff and students need from a website.

## Technical Skills

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), TypeScript, React, Next.js (App Router & Pages Router), Redux Toolkit, React Router, Context API, Material UI, Bootstrap
- **Backend:** Python, Django, Flask, REST APIs, authentication and protected routes
- **Databases:** PostgreSQL, SQL, pgAdmin
- **Tools:** Git, GitHub, GitLab (merge requests, code review), VS Code, Postman, Vercel, Figma, Vite
- **Other languages:** Java, C, C++
- **Data & AI:** Pandas, NumPy, Scikit-learn, Matplotlib, Tableau

## Projects

**CRM Web Application — Team Lead** | Live company project, Upcode | 2026 | *React*, *TypeScript*, *Material UI*, *React Context*

- Led a team of five to turn a 28-screen Figma prototype into a working CRM for a real company, covering leads, companies, deals, support tickets and a sales dashboard.
- Set up the project structure, routing, main layout and login page that the rest of the team built on.
- Reviewed every teammate's merge request on GitLab for coding standards and duplication, and made sure each page reused the shared components (data tables, status badges, drawers, tabs).
- Planned and assigned tasks across a remote team, and delivered a production-ready React frontend built to connect to a Django, PostgreSQL and JWT backend.

**E-commerce Store** | *Python*, *Django*, *PostgreSQL*, *Bootstrap*

- Built a full-stack online store with product listing, keyword search and product detail pages, plus a Django admin panel for managing products and categories.
- Implemented user accounts with sign-up, login, logout and a protected profile page using Django's authentication system.
- Added a session-based shopping cart that keeps a visitor's items as they move between pages.

**Products REST API** | *Python*, *Flask*, *PostgreSQL*

- Designed and built a REST API with 15 endpoints giving full create, read, update and delete for products, categories and brands, stored in PostgreSQL.
- Modelled the data with foreign-key relationships, linking each product to a category and a brand.
- Kept the code clean and reusable with the Repository pattern (one base class shared by every model) and tested every endpoint in Postman.

**Next.js Online Store** | *Next.js*, *React*, *Vercel*

- Built the same six-page store (home, products, product detail, cart, about, contact) twice, once with the App Router and once with the Pages Router, to compare both approaches.
- Deployed both versions live on Vercel.

**Admin Dashboard** | *React*, *Vite*, *Material UI*

- Built an admin app with login, protected routes, and full create, edit and delete for products and categories, connected to a live REST API.
- Used Material UI components for a consistent, responsive interface.

**Shopping App with Redux** | *React*, *Redux Toolkit*

- Built an Amazon-style shopping app in React, managing cart and product data in a central Redux Toolkit store.

**Personal Portfolio Website** | *Next.js*, *TypeScript*, *CSS Modules*, *Vercel*

- Designed and built a fast, responsive portfolio from scratch, with reusable typed components and content kept separate from layout.
- Added a working contact form, project filters, scroll animations and accessibility features such as keyboard focus styles and reduced-motion support.
- Worked with a professional Git workflow: a feature branch and pull request on GitHub for every section.

## Work Experience

**Project Manager – Web & Application Development** | 4SPOTS, Bahrain | 2012 – 2015

- Managed the development of 20+ web applications for the finance, education and corporate sectors.
- Worked with design and development teams to improve UI/UX and user interaction.
- Gathered client requirements, planned timelines and wrote technical documentation.
- Ran testing and quality assurance before every deployment.
- Recommended designs based on market trends and client needs.
- Key clients: Bahrain International Airport, Lexus Bahrain, Kuwait Finance House, Bahrain Islamic Bank, Telecommunications Regulatory Authority, Bahrain Kuwait Insurance Company, King Khalid University.

**Senior Secondary Computer Science Educator (CBSE)** | Asian School, Bahrain | 2025

- Taught Python, SQL, data structures and algorithms to Grades 11–12.
- Guided students through real-world software projects and reviewed their code.

**Primary ICT & Maths Teacher (IGCSE)** | Al Mahd School, Bahrain | 2023

- Taught ICT with Scratch, MS Excel and digital learning platforms.
- Communicated student progress to parents regularly.

**AI & Machine Learning Mentor** | BYJU'S Future School (online) | 2020 – 2023

- Trained 150+ students in AI/ML through project-based coding sessions.
- Achieved a 98% Teacher Quality Score and a 100% success rate in the Foundation AI-VILT programme (NASSCOM-aligned).

**Assistant Professor – Computer Science & Engineering** | Sadguru Institute of Technology | 2011 – 2012

- Taught Java programming and computer fundamentals, and wrote lab manuals.

## Education & Training

- **Full-Stack Web Development** | Upcode | 2026
- **Bachelor of Engineering – Computer Science & Engineering** | Anna University (PSN Engineering College), Tamil Nadu | 2011

## Certifications

- Intel® Skills for Innovation – 5 certifications, including Leader of Learning Experiences (Level 2) and Educator-Machine Partnerships
- Hands-on Tableau for Data Science – Udemy
- Data Analysis – BYJU'S Future School
